

Assignment 4: weightage 5%

Question:

You have already developed a business idea. Now, take the next step by transforming your idea into a functional website prototype that represents your digital venture.

Design and present a prototype (using tools such as Figma, Adobe XD, Canva, or any website builder) that clearly demonstrates how your online business will operate. Your prototype should include the following:

- A homepage that clearly communicates your brand, value proposition, and target audience
- Key pages such as About Us, Product/Service Page, Contact Page, and any other relevant sections
- A logical and user-friendly navigation structure
- Basic user interface (UI) and user experience (UX) considerations (layout, colors, readability, accessibility)
- Features that support your business model (e.g., e-commerce functionality, booking system, subscription, etc.)

In addition to the prototype, submit a brief report explaining:

- How your website design supports your business idea
- The needs of your target customers and how the prototype addresses them
- The tools and technologies used to create the prototype
- Future improvements you would implement if the website were fully developed
